PLASTIC ASSEMBLY KITS · AGES 10 & UP

IMPORTANT !

Before assembling model, study sketch carefully. Cut the parts off the runners (do not attempt to twist them off).

Important - Apply cement to inside surfaces only. Avoid getting cement on outer surfaces of model sections. Use cement very sparingly and avoid getting cement on hands, so as not to mar or smear plastic surfaces. Do not hurry. Work carefully and patiently.

Before proceeding to cement parts together, it is advisable to fit parts together dry (without cement) so that you may familiarize yourself with the parts and how they go together, also noting the points where cement is to be applied.

For best results assemble model exactly in the order indicated.

Note: Use of the wire in the SOFT PVC arms is optional, but if it is preferred, follow these instructions for bending and inserting of the wire. Cyanoacrylate (super glue) or epoxy will be required to hold the arm parts together. After the model is finished, you may bend the arms.

BARNABAS COLLINS - STEP 1

NOTE: For best results, bend one end of wire first. Place the bent end in the jig and bend as directed then cut to length.

BARNABAS COLLINS - STEP 2

NOTE: If you plan to use the alternate resin head, use Cyanoacrylate (CA) or epoxy to secure head to body.
